### ENTITIES Entity-Relationship Model

- **Person**
  - SSN (Identifier)
  - Name
  - Birth-Date
  - Beginning Date
- **Address**
  - Type (discriminator)
  - Street
  - City
  - State
  - Zip
- **Faculty**
  - SSN (Identifier)
  - Contact hours
  - Tenure status
- **Staff**
  - SSN (Identifier)
  - Position
- **Student**
  - SSN (Identifier)
  - Overall GPA
  - Major

3

### ENTITIES

### Entity-Relationship Model

- **Dept.**
  - Dept-Code (ID)
  - Dept-Name
  - Dept-Address
  - Dept-Chair
- **Section**
  - Sect-Code (ID)
  - Sect-Credit-Hours
  - Sect-Meet-Time
  - Sect-Meet-Day
- **Course**
  - Crse-Code (ID)
  - Crse-Title
  - Crse-Max-Credit-Hours
  - Crse-Var-Hours-Code
  - Crse-Fee
- **Semester**
  - Sem-Yr (ID)
  - Sem-Session (ID)

4

## Entity-Relationship Model

### RELATIONSHIPS with attributes

- **Student enrolled-in Section**
  - Credit-hours
    - In a variable credit section this attribute would be used to hold the credit hours for which a specific student is enrolled.
- **Completed**
  - Grade
    - A student is allowed to take a course more than once.

5

## ER to Relational Conversion

- 1 Consider all strong entities not subtypes (do not consider "date" entities here)
- 2 Consider sub-type entities
  - two methods
- 3 Consider weak entities
- 4 Consider One-to-many binary relationships

6

### ER to Relational Conversion

- 5 Consider many-to-many binary relationships
- 6 Consider relationships greater than binary (other than those involving "date" entities)
- 7 Consider relationships greater than binary involving a "date" entity
- 8 Consider recursive relationships

7

### Consider All Strong Entities not Subtypes

- create a new relation
- name of the relation is the name of the entity
- attributes of entity become attributes of relation
- primary key of relation is entity identifier

8

### Consider All Strong Entities not Subtypes

9

### Consider Sub-type Entities (First Method)

- treat as a strong entity
- primary key is the entity identifier
- primary key is also a foreign key referencing the relation created from the supertype entity

10

### Consider Sub-type Entities (First Method)

11

### Consider Sub-type Entities (Second Method)

- combine into the relation created from the supertype entity as a composite attribute

### Consider Sub-type Entities

- may combine the two methods within the conversion of the sub-types of a single ISA

13

### Consider Weak Entities

- create a new relation
- name of the relation is the name of the weak entity
- attributes of entity become attributes of relation

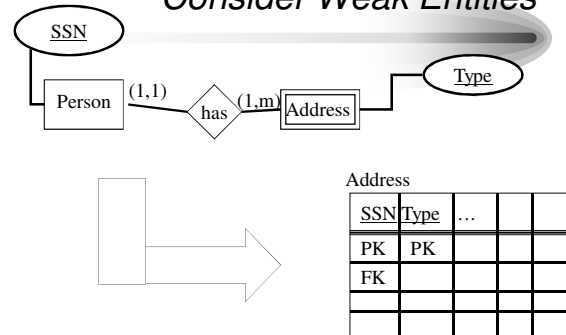

14

### Consider Weak Entities

- primary key of the relation is the concatenation of the primary key of the relation created from the strong entity and the discriminator of the weak entity
- the attribute which is the primary key of the relation created from the strong entity is also a foreign key

15

### Consider Weak Entities

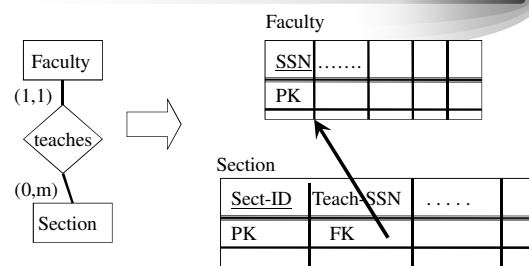

16

### Consider One-to-many Binary Relationships

- The primary key of the relation created from the "one" entity becomes a foreign key in the relation created from the "many" entity.

17

### Consider One-to-many Binary Relationships

18

### Consider Many-to-many Binary Relationships

- Create a new relation for the relationship whose primary key is the concatenation of the entity-ids of the related entities.
- The primary key attributes are also foreign keys into the relations created from the related entities.

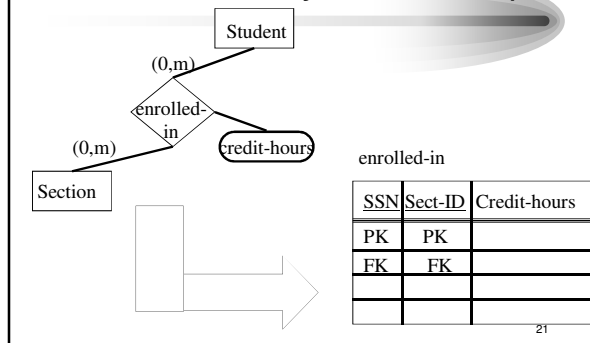

19

### Consider Many-to-many Binary Relationships

- The name of the new relation should reflect the relationship name.
- The intersection data of the relationship become non prime attributes of the relation.

20

### Consider Many-to-many Binary Relationships

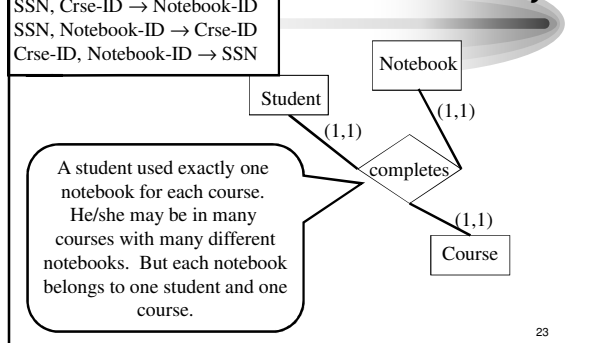

21

### Consider Relationships Greater than Binary

- Create a new relation for the relationship.
- The primary key of the new relation depends upon the cardinalities of the relating entities.

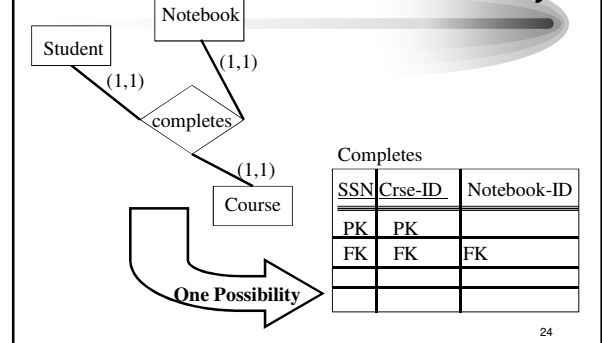

22

### Consider Relationships Greater than Binary

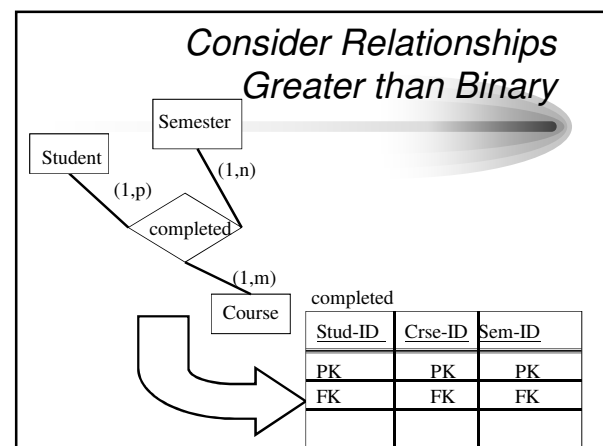

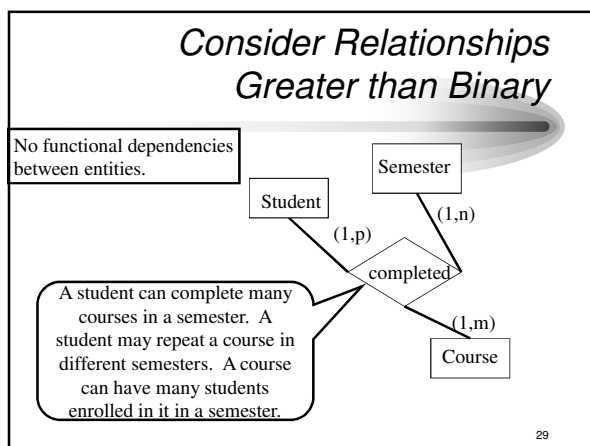

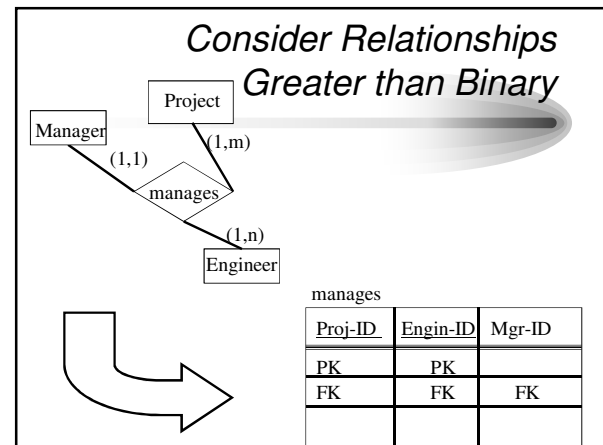

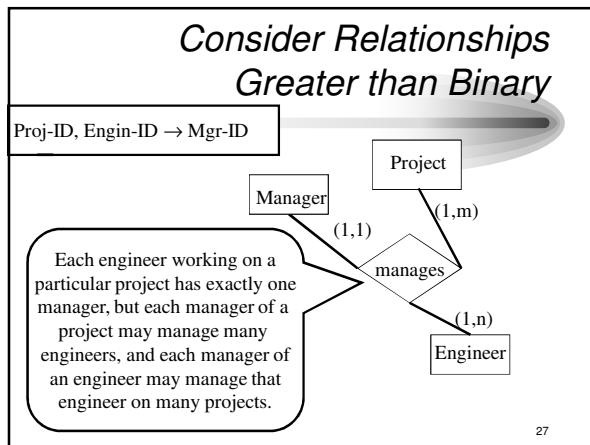

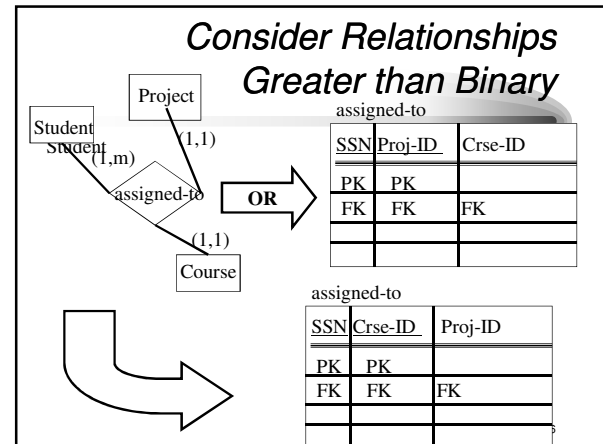

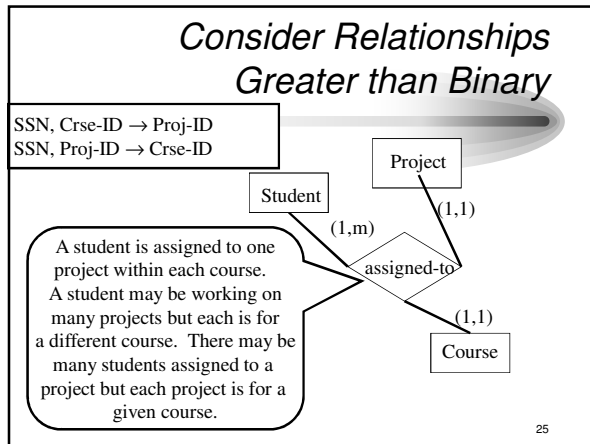

23

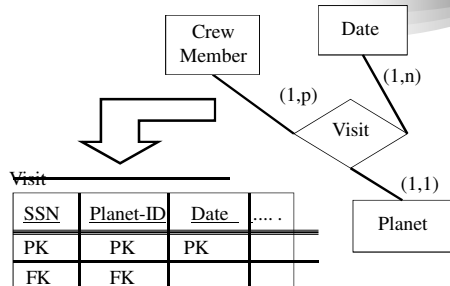

### Consider Relationships Greater than Binary

24

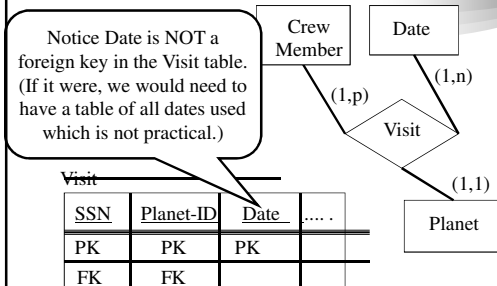

### Consider Relationships Greater than Binary Including a Date Entity

31

### Consider Relationships Greater than Binary Including a Date Entity

32

### Consider Recursive Relationships

- Treat as the comparable type of relationship
  - one-to-many
    - use a foreign key
  - many-to-many
    - create a new relation for the relationship

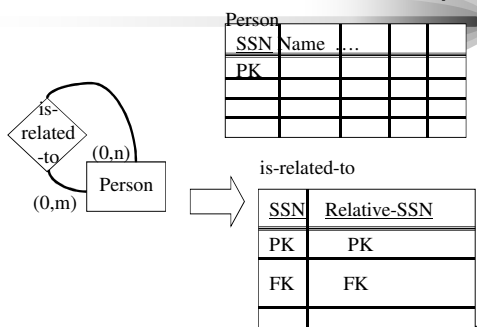

33

### Consider Recursive Relationships

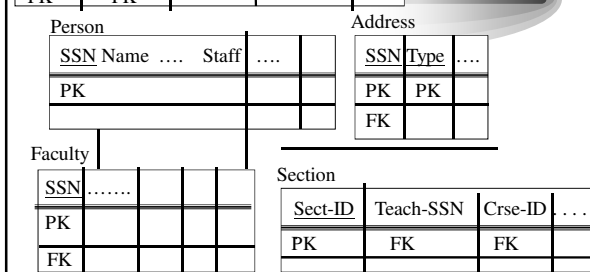

34

### Consider Recursive Relationships

35

### Completed Relational Model

36
